

-:Scalable & Secure 3-Tier Architecture on AWS:-

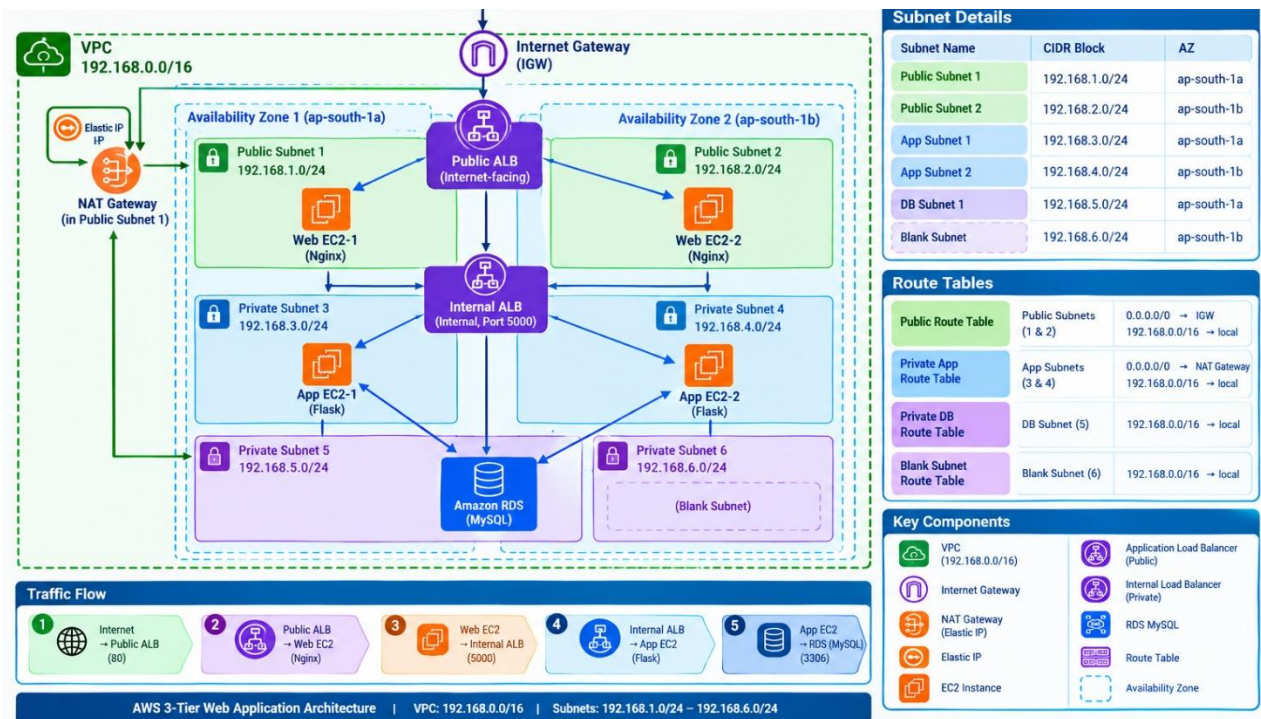

- **Objective:**

Deploy a secure, fault-tolerant, and highly available Python Flask application using a standard production-grade 3-Tier architecture on Amazon Web Services (AWS).

- **Core Infrastructure Component Stack:**

- Networking: Amazon VPC, Public & Private Subnets, Internet Gateway, NAT Gateway, Elastic IPs.
- Compute: Amazon EC2 (Presentation & Application layers), Auto Scaling Groups.
- Database: Amazon RDS (MySQL Engine).
- Traffic Management: Public (Internet-Facing) and Internal Application Load Balancers (ALB).
