

Deploying the Web Tier (Presentation Layer)

1. Launch Phase: Provision an EC2 instance (Ubuntu Server) within the Public Subnets.

2. Server Configuration Execution:

```
sudo apt update -y
sudo apt install nginx -y
sudo systemctl enable nginx
sudo systemctl start nginx
sudo systemctl status nginx
```

Active: active (running)

Output:

Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.

Thank you for using nginx.

Let's create HTML page in **/var/www/html/**. Create index.html file in this location.

*This is the default path, but we have to do this in **/usr/share/nginx/html/**. Path.
(index.html)

Also complete task 8

Task 8 - Configure Nginx Reverse Proxy for API Routing

Nginx Reverse Proxy API Routing path is **/etc/nginx/nginx.conf**

Replace nginx.conf file contain details with frontend API details.

```
sudo nginx -t
```

output

nginx: the configuration file /etc/nginx/nginx.conf syntax is ok

nginx: configuration file /etc/nginx/nginx.conf test is successful

```
sudo systemctl restart nginx
```

```
sudo systemctl status nginx
```

Output

Active: active (running)

proxy_pass http://internal-private-Loadbalancer-DNS/; # Replace your Internal Loadbalancer DNS here
